

If your web site is under construction and the DNS Nameservers are not yet set or have not resolved our server, you'll want to know how to preview your web site in a browser.

This is done by accessing your control panel and clicking on the Home link on the left. In the lower row of icons you will see an icon called **Site Preview**. Clicking this will provide you with a preview of your web site. You really only need to access the control panel once to do this as it will provide you with a re-usable link in the browser address bar.

If you save this link to your bookmarks or favorites, you can then just click on it to preview your site whenever you want to **without** having to access your control panel each time.
